Notes

This report aggregates data from the 2016 QILT SES and the RMIT SES. The QILT SES is a Federal Government mandated survey of HE undergraduate onshore commencing and completing students, administered by Social Research Centre. RMIT administered the QILT SES to all middle year HE undergraduate students, postgraduate coursework and international offshore students.

The CEQ questions apply to all middle year students and a small number of first and final year students.

The Social Research Centre (SRC) uses a new method to evaluate scales such as the Good Teaching Scale (GTS). The original method simply added the number of responses which were "Strongly Agree" or "Agree" for all 6 GTS questions and divided this by the number of actual responses. This is the Percent Agree value for the scale.

The new method counts students rather than responses. Firstly, students who did not answer at least 4 of the 6 questions are excluded from the calculation.

Responses for the remaining students are then converted to a value between 0 and 100 (Strongly Disagree=0, Disagree=25, Neither=50, Agree=75, Strongly Agree=100) with an average below 55 are regarded as "Not In Agreement".

The Percent Agree value is then the number of students In Agreement expressed as a percentage of all students that were not excluded.

The Reliability measure is a function of the number of responses and the survey population. Three levels may be reported: Good, Sufficient and Insufficient.

Section one

The % agree is calculated as follows: sum of all agree/strongly agree responses divided by the total number of items answered by all respondents. Blanks or N/As are excluded.

This section excludes HE undergraduate onshore commencing students (QILT survey exclusion)

Section Two

Satisfaction level is the sum of the weighted score for all items across all respondents, divided by the total number of items answered across all respondents.

Blanks, N/As or had no contact are excluded.

Percentages represent the %age of the total valid responses per question, with the exception of the demographics section which represent the %age of total responses.

Charts are rescaled on valid responses to total 100%.

An asterisk (*) indicates a negatively worded question recoded to calculate % AGREE.

Values may rounded to 101 %.

Valid responses exclude N/A and blank responses.
